

# VIKANE® GAS FUMIGANT – THE PROVEN SOLUTION TO ELIMINATE DRYWOOD TERMITES.

When your property has a drywood termite infestation, you need to know it's taken care of. Vikane® gas fumigant, the No. 1 whole-structure treatment, will eliminate 100 percent of drywood termites. A professional fumigation of your building provides peace of mind that all drywood termites in the structure are gone.

## Fumigation Is the Solution

It's important to you and to your neighbors to eliminate every colony in the building. A termite colony in a single unit can quickly infest neighboring units. The only way to ensure all drywood termites are eradicated is with whole-structure fumigation. Spot treatments can be ineffective, and no other alternatives can match the proven effectiveness of Vikane gas fumigant over the past 50 years.

Vikane gas fumigant is an odorless, colorless, tasteless gas that disperses throughout the entire home, even into hidden areas infested by drywood termites. After eliminating the colonies in the structure, Vikane completely dissipates, leaving no surface residue behind on dishes, linens, clothing or furnishings. And you can count on the industry's leading professionals to make sure the job's done right because Vikane is used only by qualified fumigation experts, supported by Dow AgroSciences and its distributor partners.

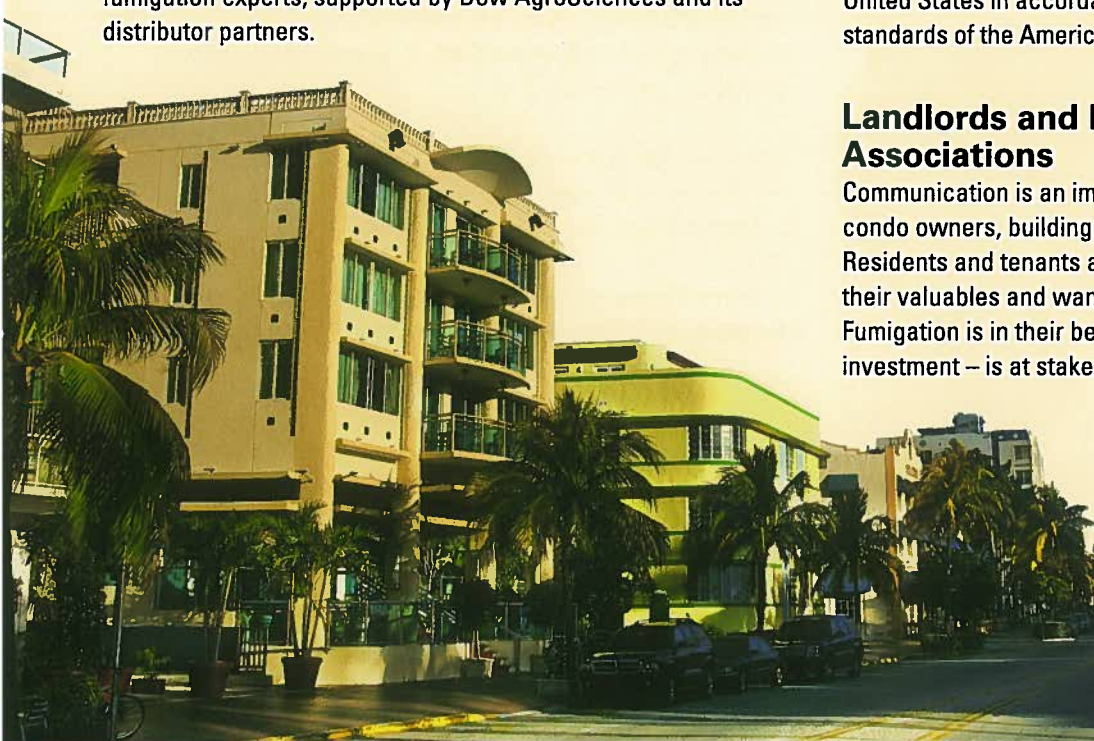

## Count on Fumigation Professionals

Fumigators who use Vikane® gas fumigant must be licensed by the state in which they work and follow extensive stewardship processes to ensure proper application and safe handling procedures. Vikane gas fumigant is manufactured in the United States in accordance with the Responsible Care® standards of the American Chemistry Council.

## Landlords and Homeowners Associations

Communication is an important step among apartment and condo owners, building managers and the fumigation company. Residents and tenants are naturally sensitive about protecting their valuables and want to return to a pest-free home. Fumigation is in their best interest. A home – their biggest investment – is at stake.

## Preparing the Building's Residents:

- Hold an information meeting well ahead of time — and send updates regularly. Suggestions include:
  - Print information in a newsletter distributed to tenants.
  - Post preparation and fumigation schedules, frequently asked questions (to help understand facts about fumigation) and other helpful information on a one-page poster or flier.

## Why rely on Vikane® gas fumigant?

- 100 percent elimination of drywood termites
- Proven effective on more than 2 million structures
- More than 50 years of trusted fumigation expertise
- Administered by trained, knowledgeable fumigation experts
- Backed by service and support unparalleled in the industry

- The fumigation company will provide residents with written instructions to help them prepare for fumigation, as well as clear guidelines as to who is responsible for what. Have one representative from each unit or dwelling sign the form as written consent and a responsibility waiver for the fumigation company. Make sure you leave a copy behind for reference.
- Provide fumigator with contact information for maintenance staff, or ask them to be on-site during key parts of the fumigation process, so if there are questions or an emergency, your fumigator can get help.
- Address building security, which can include locks, signage, warning tape and even security guards to help prevent access during the fumigation and aeration phase.
